Jonathan,

Can you put this on your to-do list. Zac agreed to take on this data set from the Office of Coast Survey. The following buckets would be set up on the AWS account. I have included all the technical folks on this email so you can send the credentials to them once it is complete.

noaa-gestofs-pds
NetCDF, GRIB2 and SHEF files

noaa-s104-gestofs-pds
HDF5 files

Let me know if you have any questions. I know you are swamped catching up on things so no rush.

Thanks,

I have a few questions to knock out this request.

First I created a bucket previously called noaa-s104-pds. Do you want me to:

- a) keep the old bucket and create a new bucket as described?
- b) Use noaa-s104-pds
- c) Use noaa-s104-gestofs-pds (Delete the old bucket?)

Second, With the S111 data Jason set up a Role to push data. Do you want me to:

- a) Setup the new buckets to match the existing S111 bucket.
- b) Setup similar to S111 but with a different Role.
- c) Setup a new IAM account along with the buckets and provide the credentials.

Thanks,

Jonathan Brannock

Jonathan,

For the first part, I think there should be a bucket called noaa-gestofs-pds for the base products. Then a noaa-s104-gestofs-pds bucket for gestofs products specific to Precision Navigation. Keep noaa-s104-pds for later use by PN team.

Everyone else, please provide input.

Jonathan and Patrick,

For the noaa-s104-pds and noaa-s104-gestofs-pds buckets, yes those can be set up similar to the noaa-s111-pds bucket. I believe you just had to give the proper permissions to our IAM Role (arn:aws:iam::196114544244:role/ocs-pn-bdptransfer-data-transfer-lambda), and I had to do the same on our side, as well as ensure that all objects written to the bucket give full permissions to your canonical ID (07cd0b2bd0f30623096b9275946be8ed8f210ec3ec83f15b416f8296c4e7e947).

Regarding the noaa-gestofs-pds bucket - I'm not sure how the data will be transferred from the supercomputer systems to AWS - Greg, do you know the plans for that?

Hi all,

Agree with Patrick's response regarding the First item. Thanks for the response on the Second item, Jason.

Regarding the Second item and noaa-gestofs-pds bucket, the transfer will be a push from WCOSS to the S3 bucket. We will use the same or similar push mechanism that Dana Strom is using for pushing NBM data from WCOSS to S3 bucket (see below). I'm not sure how that will work for Roles/credentials (haven't done this before). Perhaps you can model it off of Dana's NBM data S3 bucket setup?

- a. Using a local (not operational via Dataflow) cron on WCOSS, Dana uses:
 - i. the [aws cli](#), and after some minor [configuration](#), is able to sync the NBM files
 - ii. command used is "aws s3 sync" which acts much like typical rsync
